

NIRMIQ Exam Preparation Notes

A marks-oriented answer should match the expected depth of the question. A two-mark answer should give a compact definition and one key point. A five-mark answer should include a definition, explanation, examples, and limitations when supported by the source. A ten-mark answer should include structured headings, comparisons, diagrams if available, and source-backed detail.

Study Guide Workflow

A useful study guide should identify important questions, provide concise answers, and keep every answer tied to source material. When a question bank is available, NIRMIQ should align answers to the marks, answer style, and content type requested by the user. If diagrams are present in the uploaded material, the system should reference source diagrams instead of inventing drawings.

Privacy And Offline Use

Uploaded study material should remain local by default. The core assistant should work without a cloud account. Any future connected model mode must be opt-in and should clearly tell the user before document content leaves the machine. Local data controls such as delete, export, and clear indexed material improve trust.
